

Revision History:

Rev 1 - originated

Design notes:

Converts CFG4 power to CFG0 power while also providing galvanic isolation. This is helpful if there are bus powered nodes as grounds at nodes are not at actual 0V/Earth ground.

The DC-DC converter can be disconnected from both sides by remvingthe 4 jumpers; this is suggested if the downstream node is locally powered.

Title	A2B CFG4 to CFG0 2 pin Duraclik
